Profile

Product-minded Full Stack Engineer with 8+ years of SaaS experience shipping Node.js/TypeScript and React platforms. Former Dotmatics engineer (LabArchives); returning with domain knowledge of scientific R&D workflows and enterprise life-sciences SaaS. Builds event-driven data pipelines and AI-native developer tooling. Core maintainer of TypeORM.

Work Experience

Software Engineer, July 2025 - Present | Red Hat, Raleigh NC

- Built an event-driven data federation platform on OpenShift — scheduled polling services aggregate cross-platform posture data into a unified compliance view.
- Established automated operational pipelines on OCP with CI/CD gating, observability, and zero-touch certificate rotation for mission-critical services.
- Built IDE plugins using AI/LLM tooling to accelerate developer workflows and reduce team friction during debugging and analysis.

Software Engineer II Tech Lead, April 2023 - July 2025 | Travelers, Hartford CT

- Led a cross-functional team building a mobile authentication library in React Native with native Swift and Kotlin modules, adopted across the company's customer-facing apps. Earned the Innovative Solutions Award.
- Drove enterprise-wide identity modernization — automated Okta integrations (including event streaming) to retire legacy auth into a centralized identity framework serving millions of users.
- Built CIAM services and REST APIs (Node.js, .NET) powering authentication for customer-facing applications.
- Integrated RabbitMQ (OpenAPI-driven consumers) to synchronize customer contact data across downstream systems.
- Mentored engineers through pair programming and tech talks on open-source practices and automation.

Full Stack Software Developer, January 2022 - April 2023 | Dotmatics (Labarchives), San Diego CA

- Led migration of backend services from Ruby on Rails to Node.js and React.js — refactored 60%+ of the codebase with 100% test coverage on new code.
- Redesigned high-volume scientific reporting on AWS ECS, Redis, and S3, improving large report distribution performance by 80%.
- Built real-time collaboration via WebSockets and ElastiCache; optimized relational DB queries (MySQL, SQLite), increasing admin module engagement by 30%.

Software Engineer II, June 2021 - January 2022 | MH Corbin, Raleigh NC (Fixed Contract)

- Contract R&D for state DOT smart-highway initiatives — MERN stack apps and REST APIs (Python, Java) for traffic sensor and construction zone monitoring.
- Built event-driven MQTT pipelines for V2X field-device messaging (connected vehicle / highway infrastructure research); maintained PostgreSQL for sensor telemetry.

Software Developer, December 2018 - June 2021 | Farragut Systems, Durham NC

- Developed workers' compensation insurance solutions using ASP.NET Core, React.js, Redux, and MSSQL Server, resulting in a 60% increase in product quality and client satisfaction.
- Established the division's first CI/CD process using Azure DevOps Pipelines and Liquibase, reducing deployment time by over 50%.

Open Source Projects | github.com/smith-xyz

- TypeORM: Core maintainer of the widely-adopted TypeScript ORM.
- context-reliability-testing: Python CLI for A/B testing AI agent context configurations — measures pass rate, token usage, and tool calls across controlled experiments.
- tls-probe: eBPF-based TLS handshake analyzer in Rust that captures handshakes at the network layer without process attachment.

Key Skills

- Languages: Go, TypeScript, JavaScript, Python, Rust, C#, Java, Swift, Kotlin
- Backend: Node.js, Flask, Django, .NET Core, GraphQL
- Frontend and Mobile: React.js, Next.js, Redux, Vite, React Native
- Cloud and Infrastructure: AWS (ECS, EKS, Lambda, RDS, S3), OpenShift, Terraform, ArgoCD
- Data: PostgreSQL, MySQL, MSSQL Server, MongoDB, DynamoDB, Redis
- Messaging: RabbitMQ, MQTT, event-driven pipelines (Kafka — working knowledge)
- Developer Tools: Semgrep, eBPF, Tree-sitter, Cursor, MCP servers
- CI/CD: GitHub Actions, Jenkins, GitLab CI, Azure DevOps, Tekton, Prow
- Observability: Dynatrace, Datadog, Splunk

Education

M.A. Philosophy (computability, modal logic, probability theory), B.S. Political Science | *Liberty University*
