Profile

Product-minded engineer with 7+ years shipping full-stack systems, developer tools, and platform infrastructure. Core maintainer of TypeORM. Builds across Go, TypeScript, Python, and Rust — from mobile auth SDKs to data platforms to low-level runtime tooling. Thrives at the intersection of developer experience and complex systems.

Work Experience

Software Engineer, July 2025 - Present | Red Hat, Raleigh NC

- Built an internal data platform that replaced manual tracking with a unified view of security posture across hybrid platform offerings, giving teams real-time visibility into compliance status and SLA adherence.
- Shipped the platform to production on OpenShift with fully automated operations — zero-touch certificate rotation, scheduled data federation, and CI/CD gating across services.
- Co-developed a compliance scanner adopted by OpenShift for automated validation across platform components, integrated directly into CI pipelines as a release gate.
- Built IDE plugins using AI/LLM tooling to accelerate developer workflows, reducing friction for debugging and analysis across the team.

Software Engineer II Tech Lead, April 2023 - July 2025 | Travelers, Hartford CT

- Led a cross-functional team building a mobile authentication library in React Native with native Swift and Kotlin modules, adopted across the company's customer-facing apps. Earned the Innovative Solutions Award.
- Drove enterprise-wide identity modernization — automated Okta integrations to retire legacy auth systems into a centralized identity framework serving millions of users.
- Built CIAM services and APIs (Node.js, .NET) powering authentication for customer-facing applications. Mentored engineers through pair programming and tech talks on open-source practices and automation.

Full Stack Software Developer, January 2022 - April 2023 | Dotmatics (Labarchives), San Diego CA

- Led the migration of backend services from Ruby on Rails to Node.js and React.js, refactoring over 60% of the codebase with 100% test coverage on the new codebase.
- Redesigned the user reporting system using AWS ECS, Redis, and S3, improving large report distribution performance by 80%.
- Built a real-time messaging system using WebSocket and ElastiCache for parallel resource collaboration. Optimized MySQL and SQLite queries, increasing admin module engagement by 30%.

Software Engineer II, June 2021 - January 2022 | MH Corbin, Raleigh NC (Fixed Contract)

- Developed MERN stack solutions and REST APIs (Python, Java) for the state DOT, providing real-time traffic sensor and construction zone monitoring.
- Built event-driven solutions using MQTT for highway field device communication and maintained a PostgreSQL database for sensor data.

Software Developer, December 2018 - June 2021 | Farragut Systems, Durham NC

- Developed workers' compensation insurance solutions using ASP.NET Core, React.js, Redux, and MSSQL Server, resulting in a 60% increase in product quality and client satisfaction.
- Established the division's first CI/CD process using Azure DevOps Pipelines and Liquibase, reducing deployment time by over 50%.

Open Source Projects | github.com/smith-xyz

- TypeORM: Core maintainer of the widely-adopted TypeScript ORM.
- context-reliability-testing: Python CLI for A/B testing AI agent context configurations — measures pass rate, token usage, and tool calls across controlled experiments.
- tls-probe: eBPF-based TLS handshake analyzer in Rust that captures handshakes at the network layer without process attachment.

Key Skills

- Languages: Go, TypeScript, JavaScript, Python, Rust, C#, Java, Swift, Kotlin
- Backend: Node.js, Flask, Django, .NET Core, GraphQL
- Frontend and Mobile: React.js, Next.js, Redux, Vite, React Native
- Cloud and Infrastructure: AWS (ECS, EKS, Lambda, RDS, S3), OpenShift, Terraform, ArgoCD
- Data: PostgreSQL, MySQL, MSSQL Server, MongoDB, DynamoDB, Redis
- Developer Tools: Semgrep, eBPF, Tree-sitter, Cursor, MCP servers
- CI/CD: GitHub Actions, Jenkins, GitLab CI, Azure DevOps, Tekton, Prow
- Observability: Dynatrace, Datadog, Splunk

Education

M.A. Philosophy (computability, modal logic, probability theory), B.S. Political Science | *Liberty University*
